

Intra Aqua Acid

MINERAL

Did you know that weaned piglets have **insufficient gastric acid** production?

INTRA AQUA-ACID MINERAL: FUNDAMENTAL AT WEANING

The stomach plays important roles not only in protein digestion but also as a first defence against pathogens. Ensuring ideal pH levels in the stomach reduces risk of gut microbial imbalances alongside optimizing protein digestion.

This can effectively be achieved by drinking water acidification.

5 REASONS TO CHOOSE INTRA AQUA-ACID MINERAL

- ✓ A premium blend of organic acids with a dual mode of action for optimal gut environment
- ✓ Helps to reduce faecal moisture
- ✓ Benefits protein enzyme functioning which promotes optimal protein utilisation
- ✓ Assists in keeping pathogenic bacterial colonisation inhibited
- ✓ Highly bioavailable chelated zinc to support of gut wall integrity

It takes **7-10 WEEKS** until gastric acid secretion of piglets is fully developed

An increase of stomach pH from 2 to 3 decreases protein enzyme activity by **30%**

Low pH in the proximal gut serves as a frontline **DEFENCE** to the entry of pathogens

INTRA AQUA-ACID MINERAL SUPPORTS PROTEIN EFFICIENCY

Intra Aqua-Acid Mineral is a drinking water based supplement within our **Intra Nutrients Programme**. Benefits of this programme includes precision nutrition and continuous supplement intake via drinking water and ease of use via flexibility of dosing.
